

## Fire Station & Community Center Project Update

### Phase 1 Contract Awarded!

Following a public bid process, the Fire Board awarded the Phase 1 contract for excavation & construction of a 4-bay garage to Colorado-based Schauer Construction in mid-November.

Prep work of the site is underway! Phase 1 construction is slated to begin in early January with a targeted completion date of Spring 2017. The 4-bay garage will be immediately adjacent to our current Fire Station. *Digital concept drawing below illustrates placement of 4-bay garage structure.*

Emergency Services will remain operational through all construction phases. In addition, our community meeting space will continue to be available for use throughout Phase 1.

### Phase 2 planning in the works

Phase 2 will be an extensive remodel of the existing Fire Station structure, targeted to begin in 2017. This 2-phased approach allows the Fire Board to achieve our community goals and stay within budget.
